business processes and information systems mutually affect each other in non trivial ways frequently processes are designed without taking the systems impact into account and vice versa missing alignment at design time results in quality problems at run time robert heinrich gives examples from research and practice for an integrated design of process and system quality a quality reference model characterizes process quality and a process notation is extended to operationalize the model simulation is a powerful means to predict the mutual quality impact to compare design alternatives and to verify them against requirements the author describes two simulation approaches and discusses interesting insights on their application in practice

this book contains the proceedings of the 10e of a series of international symposia on process systems engineering pse initiated in 1982 the special focus of pse09 is how pse methods can support sustainable resource systems and emerging technologies in the areas of green engineering contains fully searchable cd of all printed contributions focus on sustainable green engineering 9 plenary papers 21 keynote lectures by leading experts in the field

models and simulations are widely being used for design optimization fault detection and diagnosis and various other decision making purposes increasingly models are developed at different scales and levels all the way from molecular level to the large scale process systems scale modelling of chemical process systems gives readers a feel for the multiscale modelling as models have been developed for various applications a general systematic method for building model has emerged this book starts with the history of modelling and its usefulness describing modelling steps in detail examples have been chosen carefully from both conventional chemical process systems to contemporary systems including fuel cell and bioprocesses modelling theories are complemented with case studies that explain step by step modelling methodologies this book also introduces the application of machine learning techniques to model chemical process

systems this makes the book an indispensable reference for academics and professionals working in modelling and simulation includes case studies that explain step by step modelling methodologies covers detailed multiscale modelling of chemical processes providing examples from traditional and novel areas provides modelling insight at micro and macro scale levels including machine learning techniques

this is a revision of a well received new book for what is a required course in chemical engineering the author uniquely emphasizes practices in industry so that students learn what aspects of plant design and control are critical this book identifies process as the central factor in plant automation and develops theory and practice to present the parameters of good dynamic performance approaches are presented for measurement selection process modification control structure design and algorithm tuning to achieve good performance over a range of operating conditions the sequence of topics modeling single loop control and tuning enhancements multiloop control and design builds the students ability to analyze increasingly complex systems culminating in multiloop control design
